ABOUT RTP

The Research Triangle Park's creation in 1959

remains one of the most transformational public-private partnerships in the history of North Carolina – and one well before its time, due to the visionary ambitions of government, business and academic leaders to create a more competitive economic base that would carry the state into the 21st century.

Today, RTP is recognized around the world for its critical mass of pioneering research, university-industry partnerships, multinational businesses and a globally competitive talent pool. It is among the largest research parks in the U.S., currently home to more than 200 companies that have created a culture of scientific advancement and collaboration.

Key RTP Facts

www.rtp.org/about-us

- 7,000 acres (2,833 hectares)
- 200+ research companies
- 39,000+ high-tech workers
- 22.5 million sq. ft. of built space

RTP 180 at The Frontier

The 2015 Company Directory was produced by the Research Triangle Foundation of North Carolina, the nonprofit owner and developer of the Research Triangle Park. Information was provided by individual companies in RTP and is current as of February 2015, unless otherwise noted.

The Research Triangle Park (RTP) is a 7,000-acre area which is specially designated for scientific research and production activities. This directory lists only those companies located within the Park's boundary, as shown on the map on the following page.

Alexander Business Suites

www.AlexanderRTP.com

Alexander Business Suites (ABS) provides office space and services within a professional environment within Research Triangle Park. ABS was structured to be an environment where smaller businesses--or larger businesses with needs to house smaller groups--could operate within RTP. ABS can accommodate companies needing anything from a single office to dozens. ABS includes high speed internet, printers, conference rooms, telephones and much more directly in its reasonable base rates, and structures its leases on a flexible short term basis. This type of arrangement was missing from RTP and ABS was established to fill this need. ABS is locally owned and operated.

@Ciena

Ciena Corporation, the network specialist, offers leading network infrastructure, intelligent software, and comprehensive services to help operators, enterprises, and governments exploit the full potential of their networks and fundamentally change the way they compete. Ciena leverages deep expertise in packet and optical networking and distributed software to deliver solutions in alignment with OPn, its architecture for next-generation networks that are programmable, scalable, and can automatically adapt to handle the changes created by the surging demand for high-bandwidth applications and services. The company's solutions form the foundation of many of the largest, most reliable and sophisticated networks across the globe.

Clinical Sensors, Inc.

Clinical Sensors is commercializing sensors to improve monitoring and care for serious medical conditions such as diabetes, chronic wounds, and infection. The membrane-based platform technologies being developed by Clinical Sensors greatly enhance the specificity, accuracy, and analytical performance of electrochemical sensors both in vivo and ex vivo. Clinical Sensors is poised to significantly transform patient care by providing accurate, rapid, and actionable results for analytes that, until recently, were challenging to measure.

Cloud Pharmaceuticals, Inc.

www.cloudpharmaceuticals.com

@CloudPharm

Cloud Pharmaceuticals is changing the way drugs are discovered and developed. Cloud Pharmaceuticals designs new drugs and drug candidates and accelerates the development process by implementing new, innovative cloud computing technology in place of traditional methods. We manage development of multiple assets through an extensive network of partners. This reduces cost, decreases development time, and creates novel molecules with therapeutic value. Our drug discovery and development implementation consists of a drug design technology called Inverse Design that uses high-performance cloud computing resources, followed by immediate preclinical optimization and rapid development toward Investigational New Drug (IND) and Phase 1. We have a growing pipeline including central nervous system (CNS), cancer, inflammation, lipid metabolism, and rare disease indications, among others.

@SyngentaBiotech

Syngenta Biotechnology, Inc. is a world leading agribusiness committed to sustainable agriculture through innovative research and technology. The company is a leader in crop protection and ranks third in the high-value commercial seeds market. Innovation is the lifeblood of Syngenta and delivering innovation is the focus of scientists at Syngenta Biotechnology. In RTP, Syngenta researchers use a combination of science and cutting-edge technology to develop innovative solutions that help farmers grow more from less. The company is in the midst of a \$71 million expansion of its RTP operations.

S

Synsei Medical

www.synseimedical.com

Synsei Medical was founded with the goal, passion, and commitment to advance the practice of maternal and fetal monitoring. With more women between the ages of 40 to 44 giving birth and having twins, along with the risk of high blood pressure, preeclampsia, and gestational diabetes during pregnancy, it is essential to provide reliable, quantitative, non-invasive methods of monitoring multiple fetuses and maternal health. What is more, mobile monitoring promises to lower costs and provide better access to care to remote locations, especially for those who do not have access to obstetric specialists, and to improve hospital workflow and efficiencies.

T3D Therapeutics Inc.

www.t3dtherapeutics.com

T3D Therapeutics' mission, as a pharmaceutical R&D company, is to develop and commercialize T3D-959, potentially an optimal disease remedial therapeutic for the treatment of Alzheimer's Disease. Unlike single dimension therapies in development that target one abnormality (i.e. pathology), for example beta amyloid plaques or tau bundles, this oral once-a-day therapy acts in a multidimensional manner. As a dual nuclear receptor agonist, T3D-959 may regulate a myriad of genes involved in Alzheimer's disease pathologies and thus may offer a greater potential to slow, stop or reverse disease progression.
